

"Schools have the potential to shape society's future through their ability to shape children's mindsets. If we want to trigger the energy transition, it starts with the young generations."

Who are we?

Sun for Schools is a Belgian startup that installs solar panels on schools while providing awareness programmes on environmental challenges for future generations.

What do we do?

By leveraging solar panels, we support schools in their ecological transition with tailored tools to launch new sustainable projects, mobilise their communities and create long-term financial and energy savings.

What is our impact?

Building on our successes in 20 Belgian schools, we are already reaching out to companies and public institutions to enhance our impact and connect all of society's stakeholders around sustainable energy and environmental education.

5000 Solar panels on 20 Belgian Schools

1. Energy

Green energy produced =

361

Brussels households/year

2. Environmental

278 t of CO² offset =

27.800

Planted trees

3. Educational

Mobilisation of the schools' communities

15.000

People mobilised

4. Economic

Auto-consumption of electricity

1.5 Million

Euros saved over 25 years

How can we collaborate?

Brussels was a first step, Europe is the next one. We are looking for partners, advisors and investors who could help us scale up the project abroad and start a movement in other cities!

What's in it for you?

This is your opportunity to be part of a growing community of changemakers built around innovative schools. Everything you give us, we'll give twice as much to schools. If you're in for visibility, we have an offer that might be of interest to you and your clients...
